

## Countryside COP2 – Soil health and water security

**Part of the: Creating the space ahead of COP27 for the UK's rural community to take centre stage and showcase our contribution to a just and equitable resilient net zero economy**

**An event for farmers to share the results from the Farm Carbon Toolkit's work with Yeo Valley on building soil carbon as part of a transition to regenerative farming**

Farm Carbon Toolkit has been working with Yeo Valley over the past two years to build knowledge on baseline soil carbon levels and investigate farming practices which build soil carbon reliably, whilst improving soil health and increasing on farm biodiversity. At this event we will share the results of this work and look at the impact on all aspects of farmland ecosystem services including water security.

This event is designed for farmers to understand more about the pioneering research that has been taking place through this project. There will be lots of time for discussions and questions, and there will be a farm walk allowing participants to see some of the current innovations at Holt Farm including silvopasture, composting, diverse leys and various grazing techniques.

### Provisional agenda for the day

- Introduction to the day from Yeo Valley
- Presentations from FCT staff Becky Willson and Liz Bowles
- Farmer perspectives
- Break for refreshments
- Farm Walk at Holt Farm, Blagdon

### When

10th October 10.30am – 3pm

### Where

Kindly hosted at the Yurt at Yeo Valley  
Organic Garden  
Holt Farm  
Blagdon  
BS40 7SQ

**Event limited to 25 attendees so book ASAP:**
